1. Abstract

(Summarize the project idea, problem background, and proposed solution. Not more than 250 words.)

This project presents the development of a Pharmacy Inventory Management System, a web-based application designed to efficiently manage and monitor pharmaceutical stock and operations in a healthcare environment. The system enables real-time tracking of medicine stock levels, expiry dates, and automated reorder alerts to ensure the availability of essential drugs and reduce wastage due to expiration. It provides modules for managing supplier orders, maintaining dispensing records, and facilitating quick medicine identification through barcode lookup. The application is built using modern web technologies such as React.js for the frontend and Node.js with Express for the backend, with data stored in a structured JSON format for simplicity and ease of implementation. Additional features such as chart analytics, notifications, export functionality, and an admin dashboard enhance usability and decision-making. By digitizing routine pharmacy tasks, the system improves accuracy, reduces manual errors, and streamlines inventory control, making it a practical solution for small to medium-scale pharmacy management. In conclusion, the system offers an efficient, reliable, and user-friendly approach to handling pharmacy operations, ensuring better stock management, reduced losses, and improved overall productivity.

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number(s)	Signature
1. Reorder Form	2520090117	
2. Supplier Orders		
3. Dispense Log		
4. Export Feature		
5. Notifications		
6. Stock List	2520030331	
7. Expiry Alert		
8. Barcode Lookup		
9. Chart Analytics		
10. Admin Panel		

3. Module Details

(Explain the responsibility of each student concerning their assigned module.)

1. Stock List Displays all available medicines with quantity and details.
2. Expiry Alert Shows medicines that are expired or about to expire.
3. Reorder Form Alerts when stock is low and allows placing new orders.
4. Supplier Orders Manages supplier details and order tracking.
5. Dispense Log Records all medicines sold or given to customers.
6. Barcode Lookup Allows quick identification of medicines using barcode scanning or input.
7. Chart Analytics Displays graphical reports for sales and stock trends.
8. Export Feature Exports data into CSV or PDF format.
9. Notifications Provides alerts for expiry, low stock, and updates.
10. Admin Panel Controls system operations and manages data.

4. Frameworks / Platforms / Software Used

(List the frameworks, libraries, platforms, or tools you plan to use.)

HTML5, CSS3, JavaScript (ES6+), React.js, Node.js, npm, Postman (API Testing), MySQL (optional), REST APIs, Express.js, Axios, React Router, Context API / Redux, LocalStorage, Bootstrap / Tailwind CSS

Guide Name and Signature (remarks if any) _____
